

AIR|SHIELD[®] SOLUTION FOR KITCHEN DOORS

Shipping a wide range of kitchens, delicate mouldings and laminate surfaces through an unforgiving courier network means Damage On Arrival (DOA) becomes an all too familiar and expensive statistic. Increased operational costs are quickly followed by poor customer feedback, impacting future sales revenue, a scenario we call the 'DOA Double Whammy'!

Our customers often carried extensive SKU's of traditional packaging material including; polystyrene (EPS), carton, bubble wrap, void fill to cope with a large array of door dimensions. This means dealing with lorry loads full of bulky packaging material, increased handling and storage costs to service busy packing lines.

Our unique, inflatable AIR|SHIELD™ core packaging solutions have been designed to protect goods in the most challenging courier networks.

Our belief in our product is supported by customer testimonials and rigorous independent International Safe Transit Association (ISTA) testing, specifically addressing possible damage caused through vibration, shock and dropping.

Additionally, we generally reduce the cubic size of the packaging, therefore, significantly improving the packaging efficiency and scalability of packing lines.

Don't delay, call now for a free and impartial advice.
